

Cloth Simulation for Computer Graphics

Synthesis Lectures on Visual Computing: Computer Graphics, Animation, Computational Photography, and Imaging

Editor

Brian A. Barsky, *University of California, Berkeley*

This series presents lectures on research and development in visual computing for an audience of professional developers, researchers, and advanced students. Topics of interest include computational photography, animation, visualization, special effects, game design, image techniques, computational geometry, modeling, rendering, and others of interest to the visual computing system developer or researcher.

Cloth Simulation for Computer Graphics

2015

[Virtual Crowds: Steps Toward Behavioral Realism](#)

Mubbasir Kapadia, Nuria Pelechano, Jan Allbeck, and Norm Badler

2015

[Finite Element Method Simulation of 3D Deformable Solids](#)

Eftychios Sifakis and Jernej Barbic

2015

[Efficient Quadrature Rules for Illumination Integrals: From Quasi Monte Carlo to Bayesian Monte Carlo](#)

Ricardo Marques, Christian Bouville, Luís Paulo Santos, and Kadi Bouatouch

2015

[Numerical Methods for Linear Complementarity Problems in Physics-Based Animation](#)

Sarah Niebe and Kenny Erleben

2015

Mathematical Basics of Motion and Deformation in Computer Graphics

Ken Anjyo and Hiroyuki Ochiai

2014

Mathematical Tools for Shape Analysis and Description

Silvia Biasotti, Bianca Falcidieno, Daniela Giorgi, and Michela Spagnuolo

2014

Information Theory Tools for Image Processing

Miquel Feixas, Anton Bardera, Jaume Rigau, Qing Xu, and Mateu Sbert

2014

Gazing at Games: An Introduction to Eye Tracking Control

Veronica Sundstedt

2012

Rethinking Quaternions

Ron Goldman

2010

Information Theory Tools for Computer Graphics

Mateu Sbert, Miquel Feixas, Jaume Rigau, Miguel Chover, and Ivan Viola

2009

Introductory Tiling Theory for Computer Graphics

Craig S.Kaplan

2009

Practical Global Illumination with Irradiance Caching

Jaroslav Krivanek and Pascal Gautron

2009

Wang Tiles in Computer Graphics

Ares Lagae

2009

Virtual Crowds: Methods, Simulation, and Control

Nuria Pelechano, Jan M. Allbeck, and Norman I. Badler

2008

Interactive Shape Design

Marie-Paule Cani, Takeo Igarashi, and Geoff Wyvill

2008

Real-Time Massive Model Rendering

Sung-eui Yoon, Enrico Gobbetti, David Kasik, and Dinesh Manocha

2008

High Dynamic Range Video

Karol Myszkowski, Rafal Mantiuk, and Grzegorz Krawczyk
2008

GPU-Based Techniques for Global Illumination Effects

László Szirmay-Kalos, László Szécsi, and Mateu Sbert
2008

High Dynamic Range Image Reconstruction

Asla M. Sá, Paulo Cezar Carvalho, and Luiz Velho
2008

High Fidelity Haptic Rendering

Miguel A. Otaduy and Ming C. Lin
2006

A Blossoming Development of Splines

Stephen Mann
2006

GRAPHICS, ANIMATION, COMPUTATIONAL PHOTOGRAPHY, AND
IMAGING #32*

ABSTRACT

Physics-based animation is commonplace in animated feature films and even special effects for live-action movies. Think about a recent movie and there will be some sort of special effects such as explosions or virtual worlds. Cloth simulation is no different and is ubiquitous because most virtual characters (hopefully!) wear some sort of clothing.

The focus of this book is physics-based cloth simulation. We start by providing background information and discuss a range of applications. This book provides explanations of multiple cloth simulation techniques. More specifically, we start with the most simple explicitly integrated mass-spring model and gradually work our way up to more complex and commonly used implicitly integrated continuum techniques in state-of-the-art implementations. We give an intuitive explanation of the techniques and give additional information on how to efficiently implement them on a computer.

This book discusses explicit and implicit integration schemes for cloth simulation modeled with mass-spring systems. In addition to this simple model, we explain the more advanced continuum-inspired cloth model introduced in the seminal work of [Baraff and Witkin \[1998\]](#). This method is commonly used in industry.

We also explain recent work by [Liu et al. \[2013\]](#) that provides a technique to obtain fast simulations. In addition to these simulation approaches, we discuss how cloth simulations can be art directed for stylized animations based on the work of [Wojtan et al. \[2006\]](#). Controllability is an essential component of a feature animation film production pipeline. We conclude by pointing the reader to more advanced techniques.

KEYWORDS

physics-based simulation, cloth simulation, computer graphics, explicit integration, implicit integration, adjoint optimization

Preface

This book has grown from a desire to make cloth simulation more accessible to people new to the field. It is the hope that this book serves as a good practical guide to bring you up to speed to allow you to implement your own cloth simulator and produce visually pleasing results.

The literature on cloth simulation is very vast and new work is published every year. The intention of this book is not to cover all the topics but rather that this tutorial will provide a solid understanding of the basics so that you will more easily understand technical papers that build upon these foundations.

Acknowledgments

I would like to thank Amanda Ha for proofreading this book and for supporting me throughout the process. Emilee Chen, thank you for motivating me to start working on this manuscript. I thank Toon Stuyck, Dries Verhees, Nathan Waters, and Erik Englessen for providing me with valuable feedback during the writing of this book.

Special thanks to Donald House, David Eberle, Witawat Rungjiratananon, and Armin Samii for their insightful comments.

This book wouldn't have come to fruition without the support of my family and the people at Morgan & Claypool publishing. Thank you!

David Eberle and Kurt Fleischer, thank you for being inspiring mentors and great friends.
