SYNTHESIS LECTURES ON ANTENNAS #5

ABSTRACT

As the growing demand for mobile communications is constantly increasing, the need for better coverage, improved capacity and higher transmission quality rises. Thus, a more efficient use of the radio spectrum is required. *Smart antenna systems* are capable of efficiently utilizing the radio spectrum and, thus, is a promise for an effective solution to the present wireless systems' problems while achieving reliable and robust high-speed high-data-rate transmission. The purpose of this book is to provide the reader a broad view of the system aspects of smart antennas. In fact, smart antenna systems comprise several critical areas such as individual antenna array design, signal processing algorithms, space-time processing, wireless channel modeling and coding, and network performance. In this book we include an overview of smart antenna concepts, introduce some of the areas that impact smart antennas, and examine the influence of interaction and integration of these areas to *Mobile Ad-Hoc Networks*. In addition, the general principles and major benefits of using space-time processing are introduced, especially employing multiple-input multiple-output (MIMO) techniques.

KEYWORDS

Adaptive arrays, Switched-beam antennas, Phased array, SDMA, Mutual coupling, Direction of arrival, Adaptive beamforming, Channel coding, MANET, Network throughput, Space-time processing.

Contents

1.	Introduction	1
2.	Mobile Communications Overview	5
2.1	General Description	5
2.2	Cellular Communications Overview	6
2.3	The Evolution of Mobile Telephone Systems	6
2.4	The Framework	8
2.5	Cellular Radio Systems: Concepts and Evolution	10
2.5.1	Omnidirectional Systems and Channel Reuse	10
2.5.2	Cell Splitting	12
2.5.3	Sectorized Systems	12
2.6	Power Control	14
2.6.1	Spectral Efficiency	15
2.7	Multiple Access Schemes	16
2.7.1	FDMA	16
2.7.2	TDMA	17
2.7.3	CDMA	17
2.7.4	OFDM	19
3.	Antenna Arrays and Diversity Techniques	21
3.1	Antenna Arrays	21
3.2	Antenna Classification	22
3.2.1	Isotropic Radiators	22
3.2.2	Omnidirectional Antennas	22
3.2.3	Directional Antennas	23
3.2.4	Phased Array Antennas	23
3.2.5	Adaptive Arrays	23
3.3	Diversity Techniques	26
4.	Smart Antennas	33
4.1	Introduction	33
4.2	Need for Smart Antennas	33
4.3	Overview	34

4.4	Smart Antenna Configurations	37
4.4.1	Switched-Beam Antennas	39
4.4.2	Adaptive Antenna Approach.....	42
4.5	Space Division Multiple Access (SDMA).....	45
4.6	Architecture of a Smart Antenna System	48
4.6.1	Receiver	49
4.6.2	Transmitter	51
4.7	Benefits and Drawbacks.....	53
4.8	Basic Principles	55
4.9	Mutual Coupling Effects.....	64
5.	DOA Estimation Fundamentals	69
5.1	Introduction	70
5.2	The Array Response Vector.....	71
5.3	Received Signal Model	73
5.4	The Subspace-Based Data Model.....	75
5.5	Signal Autocovariance Matrices.....	77
5.6	Conventional DOA Estimation Methods.....	78
5.6.1	Conventional Beamforming Method	78
5.6.2	Capon's Minimum Variance Method	79
5.7	Subspace Approach to DOA Estimation	79
5.7.1	The MUSIC Algorithm	80
5.7.2	The ESPRIT Algorithm	82
5.8	Uniqueness of DOA Estimates	85
6.	Beamforming Fundamentals	87
6.1	The Classical Beamformer	88
6.2	Statistically Optimum Beamforming Weight Vectors	89
6.2.1	The Maximum SNR Beamformer	90
6.2.2	The Multiple Sidelobe Canceller and the Maximum SINR Beamformer	91
6.2.3	Minimum Mean Square Error (MMSE)	92
6.2.4	Direct Matrix Inversion (DMI)	94
6.2.5	Linearly Constrained Minimum Variance (LCMV)	95
6.3	Adaptive Algorithms for Beamforming	96
6.3.1	The Least Mean-Square (LMS) Algorithm	97
6.3.2	The Recursive Least-Squares (RLS) Algorithm	99

6.3.3	The Constant-Modulus (CM) Algorithm	101
6.3.4	The Affine-Projection (AP) Algorithm	102
6.3.5	The Quasi-Newton (QN) Algorithm	104
7.	Integration and Simulation of Smart Antennas	107
7.1	Overview	107
7.2	Antenna Design	108
7.3	Mutual Coupling	110
7.4	Adaptive Signal Processing Algorithms	111
7.4.1	DOA	111
7.4.2	Adaptive Beamforming	112
7.4.3	Beamforming and Diversity Combining for Rayleigh-Fading Channel	114
7.5	Trellis-Coded Modulation (TCM) for Adaptive Arrays	114
7.6	Smart Antenna Systems for Mobile Ad Hoc NETworks (MANETs)	117
7.6.1	The Protocol	118
7.6.2	Simulations	118
7.7	Discussion	122
8.	Space-Time Processing	125
8.1	Introduction	125
8.2	Discrete Space-Time Channel and Signal Models	129
8.3	Space-Time Beamforming	134
8.4	Intersymbol and Co-Channel Suppression	135
8.4.1	ISI Suppression	136
8.4.2	CCI Suppression	137
8.4.3	Joint ISI and CCI Suppression	137
8.5	Space-Time Processing for DS-CDMA	137
8.6	Capacity and Data Rates in MIMO Systems	138
8.6.1	Single-User Data Ratec Limits	139
8.6.2	Multiple-Users Data Rate Limits	140
8.6.3	Data Rate Limits Within a Cellular System	143
8.6.4	MIMO in Wireless Local Area Networks	145
8.7	Discussion	148
9.	Commercial Availability of Smart Antennas	149
