

Local Networking with Distant Warmup

- Often the warmup room is far
- Marshall is in the warmup room
- Safest solution is to connect a second router, by wire.
 - WAN Port of second router goes to one of the 4 LAN ports of the main router
- Note for main room:
 - Owlcms is connected by wire
 - Announcer and timekeeper are normally very close to router, WiFi is OK
 - Athlete-facing is far from router, so LAN wiring is suggested.
 - Scoreboards are far. Wiring the main one is ideal, but not mandatory.
